**MEMORANDUM FOR THE RECORD**

**SUBJECT: Survival Weapons**

A commercial optical sight has been developed for use with handguns. Its use permits greater accuracy at increased ranges and, coupled with a folding stock originated by TSD, enables relatively unskilled handgun users to fire with near rifle accuracy. A pistol so equipped is light, compact and reliable - essential characteristics for a survival weapon.

CPYRGHT

The Phantom increases clarity of sight picture and permits accurate holding on the target because the crosshair and target are on the same plane. The scope has micrometer reticule adjustments, and is made in crosshair reticule only.

This scope was designed specifically for handguns, and has an eye-relief of 6" thru 21" which takes the shooter easily from "two hand" varmint to "arms length," target position. All optics are hard coated. No drilling or tapping is required to mount the scope, and there is no need to remove iron sights. Phantom, complete with Mount and Recoil Anchor ..... \$29.50

Additional mount clips are also available for the following:
